Planning & Deliverables

Our roadmap to success.

Introduction: Navigating Academic Demands

In today's fast-paced digital world, university students face myriad challenges in managing their academic commitments. The need to balance multiple courses, projects, and deadlines can lead to cognitive overload and diminished academic performance.

Many currently rely on disparate applications for tasks such as assignment tracking, study timers, and GPA calculation. This constant switching between tools fragments focus and reduces overall study efficiency.

Moreover, students frequently utilise messaging platforms like Telegram for daily communication. Integrating academic tools within a familiar ecosystem offers unparalleled convenience, eliminating the friction of adopting new platforms.

Campus Buddy: Our Solution

We propose Campus Buddy, a Telegram bot designed to unify essential academic tools into a single, accessible platform. This initiative directly addresses the fragmentation and stress experienced by students.

Assignment Tracker

Keep track of homework and deadlines.

Pomodoro Timer

Boost focus with timed study sessions.

Study Tips

Daily guidance for effective learning.

GPA Calculator

Monitor academic progress with ease.

Exam Countdown

Never miss an important exam or deadline.

Motivational Quotes

Stay inspired throughout your academic journey.

Accessible across all major devices, Campus Buddy will serve as a supportive digital partner, guiding students towards improved study habits and academic success.

Addressing the Core Problem: Academic Management

Many students struggle with effectively managing their academic responsibilities, leading to missed deadlines, inconsistent study patterns, and increased stress.

Fragmented Tools

Reliance on multiple, single-purpose apps creates inefficiency and breaks concentration during study sessions.

Workflow Disruption

Switching between messaging apps and academic tools disrupts workflow, reducing the likelihood of consistent engagement with organisational aids.

Motivation Challenges

Students often face difficulties maintaining motivation, with existing solutions typically lacking integration with broader study management tools.

Campus Buddy will resolve these issues by offering a holistic, integrated solution within the familiar Telegram environment, fostering better organisational skills and improved academic outcomes.

Project Objectives

Our primary aim is to develop a comprehensive Telegram bot that enhances academic management, focus, and motivation for students.

1 Assignment & Exam Management

Implement robust tracking and reminder systems for assignments and exams.

2 Focused Study & Productivity

Integrate a Pomodoro Timer and provide tailored study tips to improve concentration.

3 Academic Performance Tracking

Develop a GPA Calculator for students to monitor and understand their progress.

4 Motivation & Quick Utilities

Incorporate motivational quotes, quick calculation, and dictionary features for immediate support.

5 Seamless Integration

Ensure smooth operation and a user-friendly interface within the Telegram ecosystem.

Scope of the Project

To ensure a high-quality and timely delivery, Campus Buddy's capabilities are precisely defined, focusing on core academic support within Telegram.

What Campus Buddy Will Do

- **Personal Academic Manager:** Secure storage for assignments, due dates, and preferences.
- **Core Feature Suite:** Assignment Tracker, Pomodoro Timer, GPA Calculator, Exam Countdown, Quick Calculator, Simple Dictionary.
- **Automated Reminders:** Proactive alerts for deadlines and daily motivational content.
- **Text-Based Interface:** Intuitive interaction via native Telegram chat, requiring no learning curve.

What Campus Buddy Will NOT Do

- **University System Integration:** No connection to official university portals for grades or schedules, prioritising privacy.
- **Social or Collaboration Features:** Focused purely on personal productivity, not group interaction.
- **Advanced Computation:** Basic arithmetic only; no complex equations or graphing.
- **Financial Operations:** Strictly for academic support; no payment or transaction handling.

Significance: Empowering the Student Journey

Campus Buddy addresses critical student pain points, transforming academic management into a streamlined and empowering experience.

Reduces Digital Clutter

Consolidates multiple apps into one, fostering focus and saving time.

Enhances Student Control

Enables proactive management of assignments and grades, encouraging informed decisions.

Accessible & Convenient

Leverages Telegram's ubiquity, removing barriers to adoption and regular use.

Promotes Effective Habits

Integrates tools like Pomodoro and motivational content to cultivate discipline and reduce stress.

This bot serves as a practical support system, mitigating disorganisation and mental fatigue within students' existing digital habits.

Target Beneficiaries & Methods

Who Will Benefit?

- **University & College Students:** From freshers to final-year students, those needing support with deadlines, exam preparation, and GPA tracking.
- **High School Students:** Aspiring university students can develop essential organisational skills early.
- **Tutors & Academic Advisors:** A valuable resource to recommend for students struggling with time management, enhancing their support toolkit.

Development Methods & Tools

- **Iterative Development:** Building and testing features incrementally to ensure quality.
- **Programming:** Python 3.x with `python-telegram-bot` library.
- **Data Management:** SQLite for development, PostgreSQL for final deployment.
- **Version Control & Deployment:** Git, Heroku/Railway for hosting.

Project Planning & Deliverables

Our project is structured into distinct phases, ensuring a systematic and timely completion within the 13-week semester.

1	Proposal & Planning	2 weeks	1	2
2	Requirements & Design	3 weeks	3	5
3	Implementation & Coding	4 weeks	6	9
4	Testing & Refinement	2 weeks	10	11
5	Deployment & Documentation	2 weeks	12	13

Major Milestones

- Proposal Approval
- System Design Complete
- Core Features Working
- Comprehensive Testing
- Bot Deployed
